# B. TECH. (SEM IV) THEORY EXAMINATION 2018-19 SOFTWARE ENGINEERING

Time: 3 Hours Total Marks: 70

**Note: 1.** Attempt all Sections. If you require any missing data choose suitably.

#### **SECTION A**

## 1. Attempt all questions in brief.

 $2 \times 7 = 14$ 

- (a) List the process maturity levels in SEI's CMM.
- (b) Compare evolutionary and throw away prototyping?
- (c) Draw the Context level DFD for the Safe home Software.
- (d) Distinguish between horizontal and vertical partitioning
- (e) Distinguish between verification and validation
- (f) Write short notes on equivalence partitioning
- (g) Define software re-engineering

#### **SECTION B**

#### 2. Attempt any *three* of the following:

 $7 \times 3 = 21$ 

- (a) Explain iterative waterfall and spiral model for software life cycle and discuss various activities in each phase.
- (b) Describe how software requirements are documented? State the importance of documentation.
- (c) Explain data architectural and procedural design for a software.
- (d) Describe decomposition levels of abstraction and modularity concepts in software design.
- (e) Define black box testing strategy. What do you mean by integration testing? Explain their outcomes.

#### **SECTION C**

# 3. Attempt any *one* part of the following:

 $7 \times 1 = 7$ 

- (a) List several software process paradigms. Explain how both waterfall model and prototyping model can be accommodated in the spiral process model.
- (b) Which is more important-the product or process? Justify your answer

# 4. Attempt any *one* part of the following:

 $7 \times 1 = 7$ 

- (a) Explain the feasibility studies. What are the outcomes? Does it have either implicit or explicit effects on software requirement collection
- (b) Narrate the importance of software specification of requirements. Explain a typical SRS structure and its parts.

### 5. Attempt any *one* part of the following:

 $7 \times 1 = 7$ 

- (a) Explain about the various design concepts considered during design.
- (b) What are the characteristics of a good design? Describe different types of coupling and cohesion. How design evaluation is performed?

## 6. Attempt any *one* part of the following:

 $7 \times 1 = 7$ 

- (a) What do you mean by boundary value analysis? Give two examples of boundary value testing.
- (b) What do you mean by system testing? Explain in detail

### 7. Attempt any *one* part of the following:

 $7 \times 1 = 7$ 

- (a) Explain the need for software measures and describe various metrics
- (b) Write briefly on
  - i) CASE
- ii) Software complexity measure.
