

B.TECH.**THEORY EXAMINATION (SEM-VIII) 2016-17****EARTHQUAKE RESISTANT DESIGN****Time : 3 Hours****Max. Marks : 100****Note : Be precise in your answer. In case of numerical problem assume data wherever not provided.****SECTION – A****1. Explain the following:****10 x 2 = 20**

- (a) What are the different types of seismic wave?
- (b) Define epicenter.
- (c) State the dynamic degrees of freedom.
- (d) Name any three approaches for developing governing equation of a vibrating system.'
- (e) Write the assumption are made to simply the analysis in modeling of structures
- (f) State the time history method.
- (g) What is response spectrum?
- (h) List any 2 typical features of damages due to earthquake in masonry buildings.
- (i) What are the requirements are prescribed by the Indian Code for web reinforcement?
- (j) Write the type of machine foundation.

SECTION – B**2. Attempt any five of the following questions:****5 x 10 = 50**

- (a)
 - (i) Discuss the theory of elastic rebound.
 - (ii) List the different types of seismic waves in detail.
- (b) Brief note on fault, dip and their role in formation of earthquake with neat sketch.
- (c) An SDOF system has a mass of 50kg, a damping ratio of 0.1, a natural frequency of 10rad/s and is subjected to a harmonic excitation of amplitude 2500N and frequency of 150rad/s. Determine the steady state amplitude and phase angle of the response.
- (d) List out and explain the various factors affecting the response of the building.
- (e) Describe the Hozler's numerical technique for determining natural periods of vibration for multi degree freedom system.
- (f) Detail the typical reinforcement arrangement for beam column joint of reinforced concrete buildings to have resistance to earthquake forces.
- (g) Explain the concept of response spectrum
- (h)
 - (i) Write the recommendations of IS code for detailing of RC beams for ductility in detail.
 - (ii) Discuss the behavior of masonry buildings during earthquakes including failure pattern.

SECTION – C**Attempt any two of the following questions:****2 x 15 = 30**

- 3
 - (i) Brief on causes of earthquake.
 - (ii) Derive the equation for single degree of freedom system for damped system. Hence draw the curve for displacement versus time for an over damped system.
- 4
 - (i) Describe some typical types of damages and their causes in RC building during earthquakes.
 - (ii) Discuss the principle of capacity design for earthquake resistant design of structures.
- 5 Determine the natural frequencies and mode shape of the given MDOF system. The mass of 3000 kg, 4000 kg and 5000 kg act from top of the storey. Assume $EI = 4.5 \times 10^6 \text{ N-m}^2$ for all columns.
